STRATCO SUNROOF

ELECTRONICALLY CONTROLLED LOUVRES

STRATCO SUNROOF

ELECTRONICALLY CONTROLLED LOUVRES

YOU'RE IN CONTROL

Control the weather with the innovative Stratco Sunroof. Its electronically controlled louvres can be opened and closed to your desired position. Let the breeze and sunlight in when the weather is fine; and provide protection when the clouds set in.

By adjusting the rotating louvres with the hand held remote, or wall switch, the level of sunlight, shade and weather shielding can be controlled. The system has a rain sensor that will automatically close the blades if rain is detected. When the louvres are completely shut they form an interlocking profile that protects from the weather.

SUPERIOR DESIGN

The Stratco Sunroof is available in a flat and gable design. Made from aluminium for a long life, the Stratco Sunroof can be powdercoated to your desired colour choice. Each sunroof is engineered for your particular design requirements and can be installed by us or supplied as a kitset.

Ask us to design and quote a Stratco Sunroof at your place today.
